## Pat Saunders Drinking Straw

*Drink stays in straw  
between sips!*

The Pat Saunders drinking straw has a one-way valve. After removing the lips from the straw it stays almost full. The straw can be easily cleansed with normal washing solutions. Denture cleanser may be used if any coating occurs. The straw can be sterilised by boiling.

The clip on the side of the straw is to hook onto the side of small glasses or cups. The clip prevents the straw from falling out of the glass or cup. You are advised to wash the straw before use. Only clear liquids such as tea, coffee, etc. can pass through the valve.

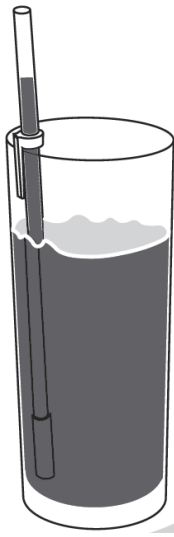

**DO NOT REMOVE  
VALVE FROM STRAW**
